Zaman Gabdrakhmanov

Backend Developer

Go and Python backend developer with over three years of experience. Build services end to end, from gathering product requirements and system design to production deployment and operations.

Phone: +7 (977) 479-52-00
E-Mail: okaymans44@gmail.com
Telegram: @chosenone_nf
GitHub: choseenonee

SKILLS

Languages and Frameworks: Go, Python, Gin, FastAPI, k6
Databases: PostgreSQL, Tarantool, Redis, Qdrant
Infrastructure: Kafka, RabbitMQ, Docker, Kubernetes, Helm, Linux
Monitoring: Prometheus, Grafana, OpenTelemetry
English: B2

WORK EXPERIENCE

VK tech – R&D AI Product Lab — September 2025 – Present

Go/Python Developer

About the Team

Validate product hypotheses with a focus group, turn successful prototypes into production services, and integrate them into VK tech products.

Tech Stack

Go, Python, PostgreSQL, Qdrant, Kafka, Kubernetes, Helm, MCP, Prometheus, Grafana, Linux

Responsibilities

- Development of a high-throughput message indexing service, an AI agent, and MCP integrations. The AI agent serves **1,100 monthly active users** within VK.
- Production operations for the team's services and integration of the AI assistant and MCP into on-premises releases

Achievements

- Designed and launched a production message indexing service for semantic search (PostgreSQL → Qdrant). Sustained approximately 3,000 messages/sec during reindexing; the source database contains over 1 billion messages.
- Enabled independent production deployments across the team by mastering VK's deployment workflow and training teammates.
- Migrated the live AI assistant from its MVP implementation to a new architecture. The new services gave users access to Mail and Drive tools.
- Took ownership of integrating the AI assistant into on-premises deployments, covering product and technical requirements alignment, implementation, and regression testing support.
- Organized candidate sourcing, designed the interview format, and conducted interviews alongside team leaders, hiring two interns. Under my mentorship, one intern implemented AI agent quality evaluation using real user queries.
- Designed the challenge and implemented the automated evaluation platform for IT Academy Hack 2026; prepared a sample solution and edited the challenge write-up on Habr.

VK tech – Pilot Projects Team — August 2024 – September 2025

Go Developer

About the Team

Development and testing of pilot solutions based on the Tarantool DBMS for enterprise clients.

Tech Stack

Go, Tarantool, Ansible, etcd, Prometheus, Docker, Grafana, K6, Linux

Responsibilities

- Design and development of pilot solutions, load testing
- Query optimization and improving data access patterns

- Client communication and presentation of results
- CLI development in Go:
  - A tool for deploying Tarantool with preconfigured scenarios (topology, tables, load tests, Grafana)
  - A data generator with support for domain dictionaries, relationships, and multiple output formats (CSV, Parquet, HTTP, Tarantool)

Achievements

- Developed the data generator, published as open source – SDVG
- Improved Parquet write performance by 25%
- Developed a distributed load testing tool with ETCD synchronization
- Discovered latency dependency on DBMS and CPU configuration in a pilot for a major bank
- Completed 3 pilots
- High performance review rating

Salut! — Local Discovery App — November 2023 – March 2024

Lead Backend Developer

Tech Stack

Go (Gin), PostgreSQL, Python, RabbitMQ, Redis, Docker, Docker Compose, Jaeger, OpenTelemetry

Responsibilities

- Backend design and development of the core service in Go and an ML service in Python
- CI/CD setup using GitHub Actions
- Management of a three-person team

ACHIEVEMENTS

- **3rd place**, Moscow Tourist Hackathon *(GitHub)* — *March 30 – April 7, 2024*
  Contributed to the UX/UI redesign of RUSSPASS's routes section and developed an NFC-based check-in concept for tourist attractions
- **2nd place**, IT Purple Hack *(GitHub)* — *March 9 – 15, 2024*
  Optimized price search by category and region and designed a geo-distributed system for parallel price matrix updates nationwide
- **2nd place**, LCT Hackathon Yakutia *(GitHub)* — *December 9 – 23, 2023*
  Developed VK data collection via API and proposed incorporating personality traits (Big Five model) into a career guidance ML model based on social media profiles

EDUCATION

NUST MISIS, Institute of Computer Science
Applied Mathematics, bachelor's program
